

LOFT SERIES DIRECT-VENT FIREPLACES

Loft Medium Direct-Vent
Fireplace with Matte Black
and Stainless Steel Surround

Loft Contemporary Direct-Vent Fireplaces

Loft Series fireplaces deliver warmth - along with a clean pallet to let you exhibit your flair for contemporary design.

Designed for in-wall or mantel installation, your direct-vent Loft fireplace features state-of-the-art technology for extraordinary performance.

Black porcelain lines the fireplace interior, including the burner top, creating a subtle reflective surface that enhances the appearance of depth. Flickering yellow flames dance atop the linear burner echoing their light off the glass and the porcelain liner to create a nearly infinite flame effect - making your Loft fireplace mesmerizing from any angle.

Loft Contemporary See-Through Direct-Vent Fireplaces

At just 18 inches deep, this Loft Fireplace provides the see-through contemporary look without cutting into your floor space.

The Loft See-Through Fireplace includes our premium RF remote control that allows you to vary the flame height and blower speed, and operate the light - all from the comfort of your recliner.

The standard black porcelain liner adds to the feeling of depth. Two optional surrounds - matte black and matte black with stainless steel - suit this ultra-contemporary looking system.

Loft Direct-Vent fireplaces install with 4 x 6 5/8-inch vent pipe.

Surrounds and Accessories

The required metal surround is available in two styles. The elegant matte black surround frames the fireplace and emphasizes the interior. The two-tone surround - with bold stainless steel panels at the top and bottom joined by matte black verticals - accentuates the horizontal flow of the fireplace and makes a thoroughly modern statement.

Put a twinkle in your Loft fireplace by covering the burner top with the optional decorative glass. Choose from lustrous Black Polished, Blue Clear, and Clear Frost. Your dealer may offer additional colors.

Fireplace screens, available as options for all direct-vent systems, protect you and your family from inadvertently touching the hot glass.

Fireplace Controls

Our Millivolt systems operate without electricity to provide heat even in a power outage. Take charge of your Millivolt fireplace with an optional on-off remote control or wall switch.

Our Green Earth Preferred™ Intermittent Pilot (IP) systems put the green in contemporary living. IP systems include an on/off remote control to light your fireplace from anywhere in the room. They improve efficiency by eliminating the standing pilot light - which helps save energy and your money. In the event of a power outage, your IP system can be switched to operate with a standing pilot and will provide heat until power is restored.

Black Polished
Decorative Glass

Blue Clear
Decorative Glass

Clear Frost
Decorative Glass

Optional fireplace screens maintain a safe distance between you and the hot glass without detracting from the overall view of the fireplace.
